SUMMARY

Software Engineer with 2+ years of experience in full-stack development, complex UI architecture, and API integration. Proven track record of building greenfield products from scratch within agile teams using React, Astro, and Spring Boot. Skilled in OAuth 2.0 security design and delivering AI-driven product features at scale.

EXPERIENCE

Ping Identity

Bengaluru, India

Software Engineer 2

April 2026 – Present

- Closed a security gap in OAuth 2.0 Token Exchange by introducing an opt-in configuration flag across the app-management backend and Authorization Server, enabling group-membership policies to be enforced at token issuance time and surfacing appropriate audit events, without new APIs or data stores.
- Delivered AI Agent licensing enforcement in the React frontend via dynamic capability checks that hide and disable agent actions for unlicensed users, surfacing contextual upgrade prompts and a “Contact Sales” CTA to support the product’s upsell funnel.

Tech stack: Docker, React, JavaScript, Spring Boot, OAuth 2.0, Node.js

Software Engineer 1

June 2024 – March 2026

- Co-architected and launched a new enterprise marketplace from scratch within a 4-person team, leading the React/Astro frontend and contributing to Node.js tagging and analytics pipelines.
- Designed and shipped a production-grade Lexical rich-text editor featuring a dual-mode architecture (WYSIWYG + Markdown preview) and dynamic resource-upload workflows that auto-configure based on catalog type.
- Spearheaded frontend development from scratch for the AI Agents console, integrating full credential-rotation pipelines within the shared platform ecosystem.
- Established the team’s foundational frontend testing suite using Playwright E2E and Jest, providing a regression safety net for the growing codebase.

Tech stack: React, Astro, TypeScript, Node.js, Playwright, Jest, Lexical

Software Engineer Intern

January 2024 – June 2024

- Engineered comprehensive test coverage for the DaVinci API using Chai, Mocha, and Sinon, raising coverage from 23% to over 70% and significantly reducing regression risk.

LexisNexis Risk Solutions (HPCC Systems)

Remote

Project Intern

September 2022 – January 2023

- Implemented a batch image-processing library in Enterprise Control Language (ECL), enabling efficient conversion of 100,000+ images to ECL tensors for distributed neural network pipelines.

PROJECTS & HACKATHONS

AI Form Builder — 3rd Prize, Ping Winter Hackathon 2024 | React, Generative AI

- Built an LLM-powered engine that interprets natural-language prompts, generates complex JSON schemas, and renders fully validated web forms in real time.

GetLance Freelance Portal | MERN Stack, Stripe

- Developed a full-stack peer-to-peer campus freelancing platform with JWT authentication and Stripe API integration for secure financial transactions.

Credit Card Fraud Detection | Python, Scikit-learn, SweetViz

- Built a machine learning pipeline on a 32-feature dataset to classify fraudulent transactions, performing EDA and visualisation with SweetViz, feature engineering via logarithmic scaling and importance selection, and class imbalance correction using SMOTE oversampling. Evaluated Decision Tree, Gradient Boosting, and Logistic Regression models.

EDUCATION

R.V. College of Engineering

Bengaluru, India

B.E. in Computer Science Engineering (CGPA: 8.46)

2020 – 2024

TECHNICAL SKILLS

Languages: TypeScript, JavaScript, Java, Python, C++, SQL, HTML/CSS

Frontend & UI: React, Astro, Redux/RTK, Lexical Editor, Tailwind CSS, React Hook Form

Backend & Cloud: Spring Boot, Node.js, REST APIs, OAuth 2.0, SAML, AWS S3, Docker

Testing & Tooling: Jest, Playwright E2E, React Testing Library, Chai, Mocha, Git, Postman
